Job Brief - Graphic Designer

We are a venture-backed start-up in the Fintech sector, based in the USA and Scotland. Our SAAS product is designed and built in Scotland and we have a small but growing product design team.

We are looking for a creative and motivated graphic designer to work with us on:

- Brand and visual identity for marketing and general promotion (including website) - we're looking for creative input on our messaging and illustration of the system we're building. We will appreciate fresh ideas and knowledge of current trends in the world of fintech.
- Design work for news and social media - helping us produce an interesting media feed.
- Layout (digital and print) - standard business assets e.g. flyers, one-pagers and business cards etc.

In addition to these, there may also be opportunities to work with us on the product (UI design) itself if this is of interest, although this is not necessary.

Details

This job would be part-time, starting immediately in a freelance capacity. We hope this would be an ideal role for a current student.

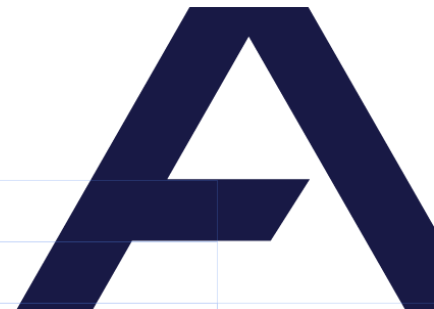

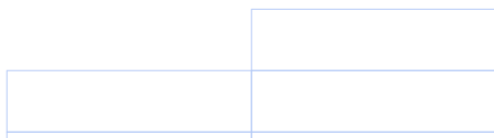

We can be flexible with timing and commitments - we expect to need a few hours of time each week. It would be advantageous but not essential if you could work in the afternoon / evening to ensure we can speak to colleagues in the USA.

We hope to have good warning about deadlines but would appreciate someone who can be responsive.

For more information, please contact Ken Boyd on ken@ascentplatform.io

Who we are

Ascent is building the next-generation data platform that provides financial institutions with the tools and data sources required to service their customers. We empower our customers to provide vital financial services with speed and visibility. We enable financial institutions to increase operational capacity, reduce risk, strengthen borrower relationships, and confidently lend to traditionally excluded portions of the economy.

Ascent is a venture-backed company formed of a global team with members across the US and UK. We're passionate about building innovative, best-in-class technology to power data-driven financial services.
